

	COUNTY OF SACRAMENTO EMERGENCY MEDICAL SERVICES AGENCY	Document #	2521.sp
	<u>PROGRAM DOCUMENT:</u> Ambulance Patient Offload Time (APOT) Data Collection and Reporting – UCDMC PILOT	Initial Date:	10/10/16
		Last Approved Date:	01/14/25
		Effective Date:	02/03/25
		Next Review Date:	03/03/25

Signature on File

EMS Medical Director

Signature on File

EMS Administrator

Purpose:

- A. To establish standardized methodologies for Ambulance Patient Offload Time (APOT) data collection and reporting to Sacramento County Emergency Medical Services Agency (SCEMSA) in accordance with California Health and Safety Code Division 2.5, Section 1797.225.
- B. Use statewide standard methodology for calculating and reporting APOT developed by California Emergency Medical Services Authority (EMSA).
- C. Establish criteria for the reporting of, and quality assurance follow-up for a non-standard patient offload time.

Authority:

- A. California Health and Safety Code, Division 2.5 Section 1797.120 and 1797.225

Background:

- A. California Health and Safety Code, Division 2.5, Section 1797.120 requires EMSA to develop a standard methodology for calculation of, and reporting by, a Local Emergency Medical Services Agency (LEMSA) of ambulance patient offload time.
- B. California Health and Safety Code Division 2.5, Section 1797.225 establishes that a LEMSAs may adopt policies and procedures for calculating and reporting ambulance offload times. Those policies and procedures must be based on the statewide standard methodology developed pursuant to California Health and Safety Code, Division 2.5, Section 1797.120. LEMSAs that adopt patient off-loading policies and procedures must also establish criteria for reporting and quality assurance follow-up for a non-standard patient off load time.

Definitions:

- A. **Ambulance arrival at the Emergency Department (ED)** – The time an ambulance stops at the location outside the hospital ED where the patient will be unloaded from the ambulance.
- B. **Ambulance Patient Offload Time (APOT)** – the time interval between the arrival of an ambulance patient at an ED and the time the patient is transferred to the ED gurney, bed, chair or other acceptable location and the emergency department assumes the responsibility for care of the patient .
- C. **Ambulance Patient Offload Time (APOT) Standard** – The time interval standard established by the LEMSAs within which an ambulance patient that has arrived in an ED should be transferred to an ED gurney, bed, chair or other acceptable location and the ED assumes the responsibility for care of the patient.
- D. **Non-Standard Patient Offload Time** – The ambulance patient offload time for a patient exceeds a period of time designated by the LEMSAs. (See Standards below).

- E. **Ambulance Transport** – The transport of a patient from the prehospital EMS system by ambulance to an approved EMS receiving hospital. This includes Inter-facility transports, 7-digits response, and other patient transports to the ED.
- F. **APOT 1** – An ambulance patient offload time interval process measure. This metric is a continuous variable measured in minutes and seconds then aggregated and reported at the 90th percentile.
- G. **APOT 2** – An ambulance patient offload time interval process measure. This metric demonstrates the incidence of ambulance patient offload times that exceed a thirty (30) minute reporting goal reported in reference to 60, 120 and 180 minute time intervals, expressed as a percentage of total EMS patient transports.
- H. **APOT 3** – The cumulative time, expressed in hours, for patient offload times in excess of 30 minutes. This metric demonstrates the time EMS personnel spend at hospitals awaiting transfer of care to hospital staff, in hours, in excess of the thirty (30) minute target for patient offload.
- I. **Ambulance Patient Offload Delay (APOD)** – The occurrence of a patient remaining on the ambulance gurney and/or the emergency department has not assumed responsibility for patient care beyond the LEMSA approved APOT standard. (Synonymous with non-standard patient offload time).
- J. **Clock Start** – The time that captures when APOT begins. This is captured in the current version of NEMESIS data set as the time the patient/ambulance arrives at destination/receiving hospital (eTimes.11) and stops at the location outside the hospital ED where the patient will be unloaded from the ambulance.
- K. **Clock Stop** – The time that captures when APOT ends. This is captured in the current version of NEMESIS data set as destination patient transfer of care date/time (eTimes.12).
- L. **Emergency Department (ED) Medical Personnel** – An ED physician, mid-level practitioner (e.g. Physician Assistant, Nurse Practitioner), Registered Nurse (RN) or Emergency Department Technician.
- M. **EMS Personnel** – Public Safety First Responders, EMTs, AEMTs, EMT-II and/or paramedics responsible for out of hospital patient care and transport consistent with the scope of practice as authorized by their level of credentialing.
- N. **Transfer of Patient Care** – The transition of patient care responsibility from EMS personnel to receiving hospital ED medical personnel. (See criteria below in Measurement Methods).
- O. **Verbal Patient Report** – The face to face verbal exchange of key patient information between EMS personnel and ED medical personnel provided that is presumed to indicate transfer of patient care.
- P. **Written EMS Report** – The written report supplied to ED medical personnel that details patient assessment and care that was provided by EMS personnel. Electronic report (ePCR) is required by Health and Safety Code 1797.227.

Standard Offload Time APOT:

Receiving hospitals have a responsibility to ensure policies and processes are in place that facilitates the rapid and appropriate transfer of patient care from EMS personnel to the ED medical personnel within 30 minutes of arrival at the ED.

Non-Standard Offload Time Extended Delay:

APOD occurs when patient offload time is exceeded. SCEMSA shall collect and report the percentage of patients that are delayed by 30:01-60 minutes, 60:01-120 minutes, 120:01-180 minutes, and delays greater than 180:01 minutes to EMSA.

If APOD occurs the hospital should make every attempt to:

- A. Provide a safe area in the ED within direct sight of ED medical personnel where the ambulance crew can temporarily wait while the hospital's patient remains on the ambulance gurney.
- B. Inform the attending EMS Personnel of the anticipated time for the offload of the patient.

- C. Extended offload times reported during a Mass Casualty Incident (MCI) or other large incident(s) response will be taken into consideration.

EMS personnel are directed to do the following to prevent APOD:

- A. Provide the receiving hospital ED with the earliest possible notification that the patient is being transported to their facility.
- B. After thirty (30) minutes and every thirty (30) minutes thereafter, check with hospital personnel on status of off-load time.
*Refer to PD# 2524 - Extended Ambulance Patient Off-Load Times (APOT)
- C. After sixty (60) minutes of APOT, notify the EMS organization's on duty supervisor.
*Refer to PD# 2524 - Extended Ambulance Patient Off-Load Times (APOT)
- D. Obtain a signature from the ED medical personnel as soon as patient care has been transferred.
- E. Work cooperatively with the receiving hospital staff to transition patient care within the timeframes established by this policy.
- F. EMS personnel are responsible when able, to immediately return to response ready status once patient care has been transferred to ED medical personnel and the patient has been offloaded from the ambulance gurney.

Direction of EMS Personnel:

EMS personnel shall continue to provide patient care prior to the transfer of patient care to the receiving hospital ED medical personnel. All patient care shall be documented according to SCEMSA policies. Medical Control and management of the EMS system, including EMS personnel, remain the responsibility of the LEMSAs Medical Director and all care provided to the patient must be pursuant to SCEMSA protocols and policies.¹

Refer to PD# 2524 - Extended Ambulance Patient Off-Load Times (APOT)

Patient Care Responsibility:

The responsibility for patient care belongs to the receiving hospital once the patient arrives on hospital grounds.² Receiving hospitals should implement processes for ED medical personnel to immediately triage and provide the appropriate emergency medical care for ill or injured patients upon arrival to the ED by ambulance.

Transfer of Patient Care:

Upon arrival of patients under the care of EMS personnel the hospital ED medical personnel should make every attempt to accept a verbal patient report and offload the patient to a hospital bed or other suitable sitting or reclining device at the earliest possible time not to exceed 30:01 minutes. During triage by ED medical personnel, EMS personnel will provide a verbal patient report containing any pertinent information necessary for the ongoing care of the patient. Transfer of patient care is completed once:

- ED medical staff has accepted a verbal patient report
- The patient has been transferred to a hospital bed
- A signature obtained from medical ED personnel.

If transfer of care and patient offloading from the ambulance gurney exceeds the 30:01 minute standards, it will be documented and tracked as APOD.

Measurement Methods:

- A. Clock Start (eTimes.11):
The time the ambulance arrives at the ED and stops at the location outside the hospital ED where the patient will be unloaded from the ambulance.
- B. Clock Stop (eTimes.12):
When the patient is transferred to the ED gurney, bed, chair or other acceptable location and the ED has assumed the responsibility for care of the patient.

¹Medical Care of EMS patients awaiting transfer of care to hospital staff-Letter Addendum1

²Emergency Medical Treatment and Active Labor Act (EMTALA), 42 US Code of Federal Regulations

C. Transfer of Care Criteria:

- Verbal patient report is given by transporting EMS personnel and acknowledged by ED medical personnel;
- ED medical personnel signs ePCR or other patient care form (completion of ePCR is not a requirement).

Data Collection and Documentation:

- A. EMS providers shall implement digital CAD data migration into ePCR platforms and report data to SCEMSA in real time or at least once per twenty-four (24) hour period.

The following data will be collected during the ED Technician signature trial period will include, but not be limited to:

1. Summary of critical events/unusual occurrences.
2. Time from EMS transfer to nurse assignment.
3. Time from EMS transfer to physician assignment.
4. Patient demographic information:
 - a. Age.
 - b. Sex.
 - c. ESI category.
5. Number of patients that were subsequently moved to the waiting room based on stability criteria (5050 policy).
6. Pre and post-trial APOT.

Reporting to EMSA By SCEMSA:

SCEMSA staff will complete reports to EMSA based on EMSA guidelines.

- A. **APOT-1:** The number reported is the APOT in minutes for transfer of care of 90% percentile of ambulance patients and the number of ambulance runs included in the report.
- B. **APOT-2:** The number reported is the percentage of ambulance patients transported by EMS personnel that experience an ambulance patient offload delay beyond thirty (30:01) minutes, which has been set as a target standard for statewide reporting consistency and to exclude rapid APOT from being combined with more extended times. Time intervals will be reported by sixty (60:01) minute intervals up to one hundred eighty (180:01) minutes then any APOT exceeding one hundred eighty (180) minutes.

Appendix A: Section 1

Section 1797.225 is added to the Health and Safety Code, to read:

1797.225.

- (a) A local EMS agency may adopt policies and procedures for calculating and reporting ambulance patient offload time, as defined in subdivision (b) of Section 1797.120.
- (b) A local EMS agency that adopts policies and procedures for calculating and reporting ambulance patient offload time pursuant to subdivision (a) shall do all of the following:
- (1) Use the statewide standard methodology for calculating and reporting ambulance patient offload time developed by the authority pursuant to Section 1797.120.
 - (2) Establish criteria for the reporting of, and quality assurance follow-up for, a nonstandard patient offload time, as defined in subdivision (c).

(c) (1) For the purposes of this section, a “nonstandard patient offload time” means that the ambulance patient offload time for a patient exceeds a period of time designated in the criteria established by the local EMS agency pursuant to paragraph (2) of subdivision (b).

(3) “Nonstandard patient offload time” does not include instances in which the ambulance patient offload time exceeds the period set by the local EMS agency due to acts of God, natural disasters, or manmade disasters.
